

Yúusnewás

St. Paul's Indian Residential School
Student Experience Project

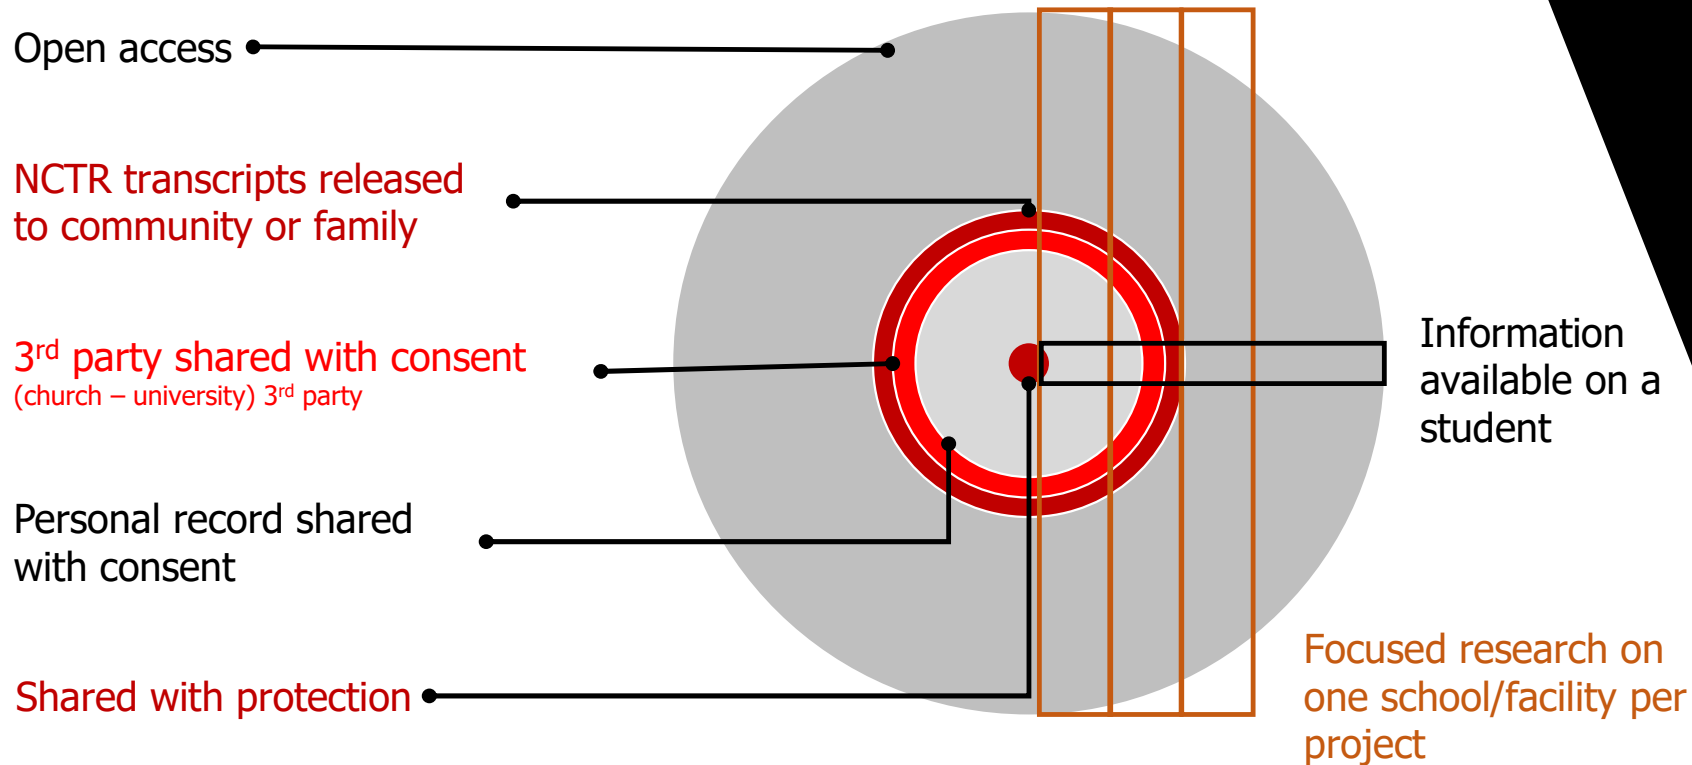

For more information about Yúusnewás, please visit the Squamish Nation website squamish.net or email Yuusnewas@squamish.net

Community Collaboration

Community teams are answering questions,
national collaboration changes the future
conversation for all.

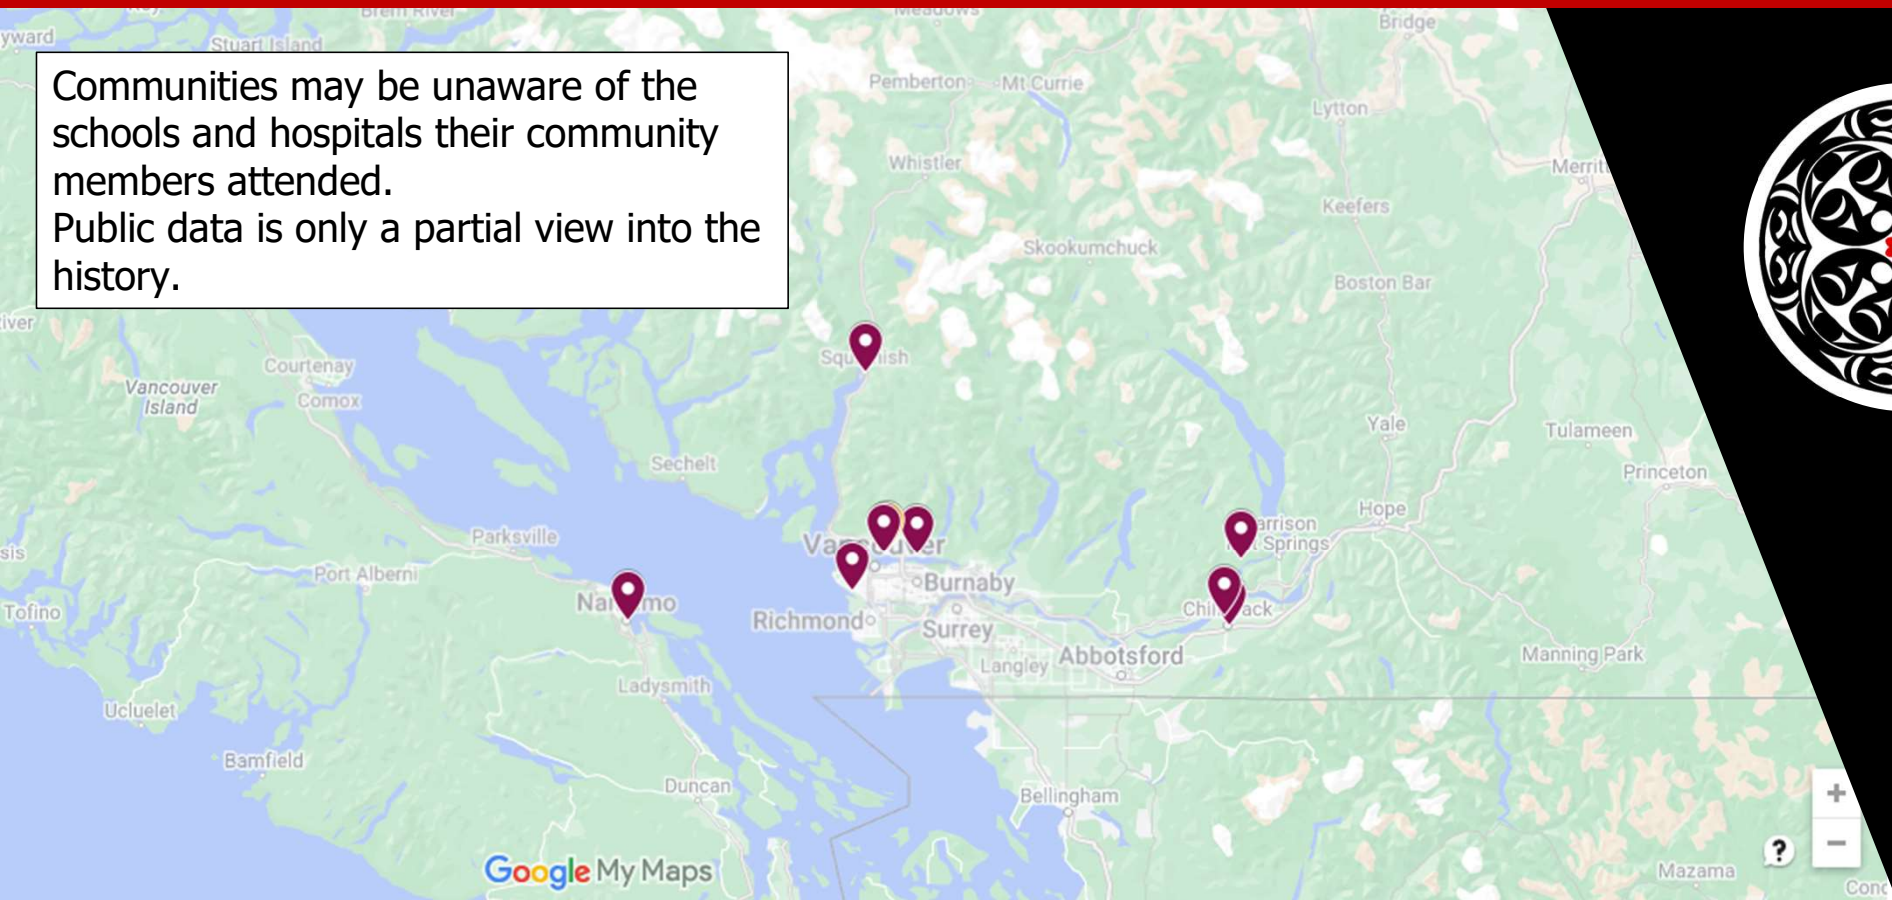

Problem Statement

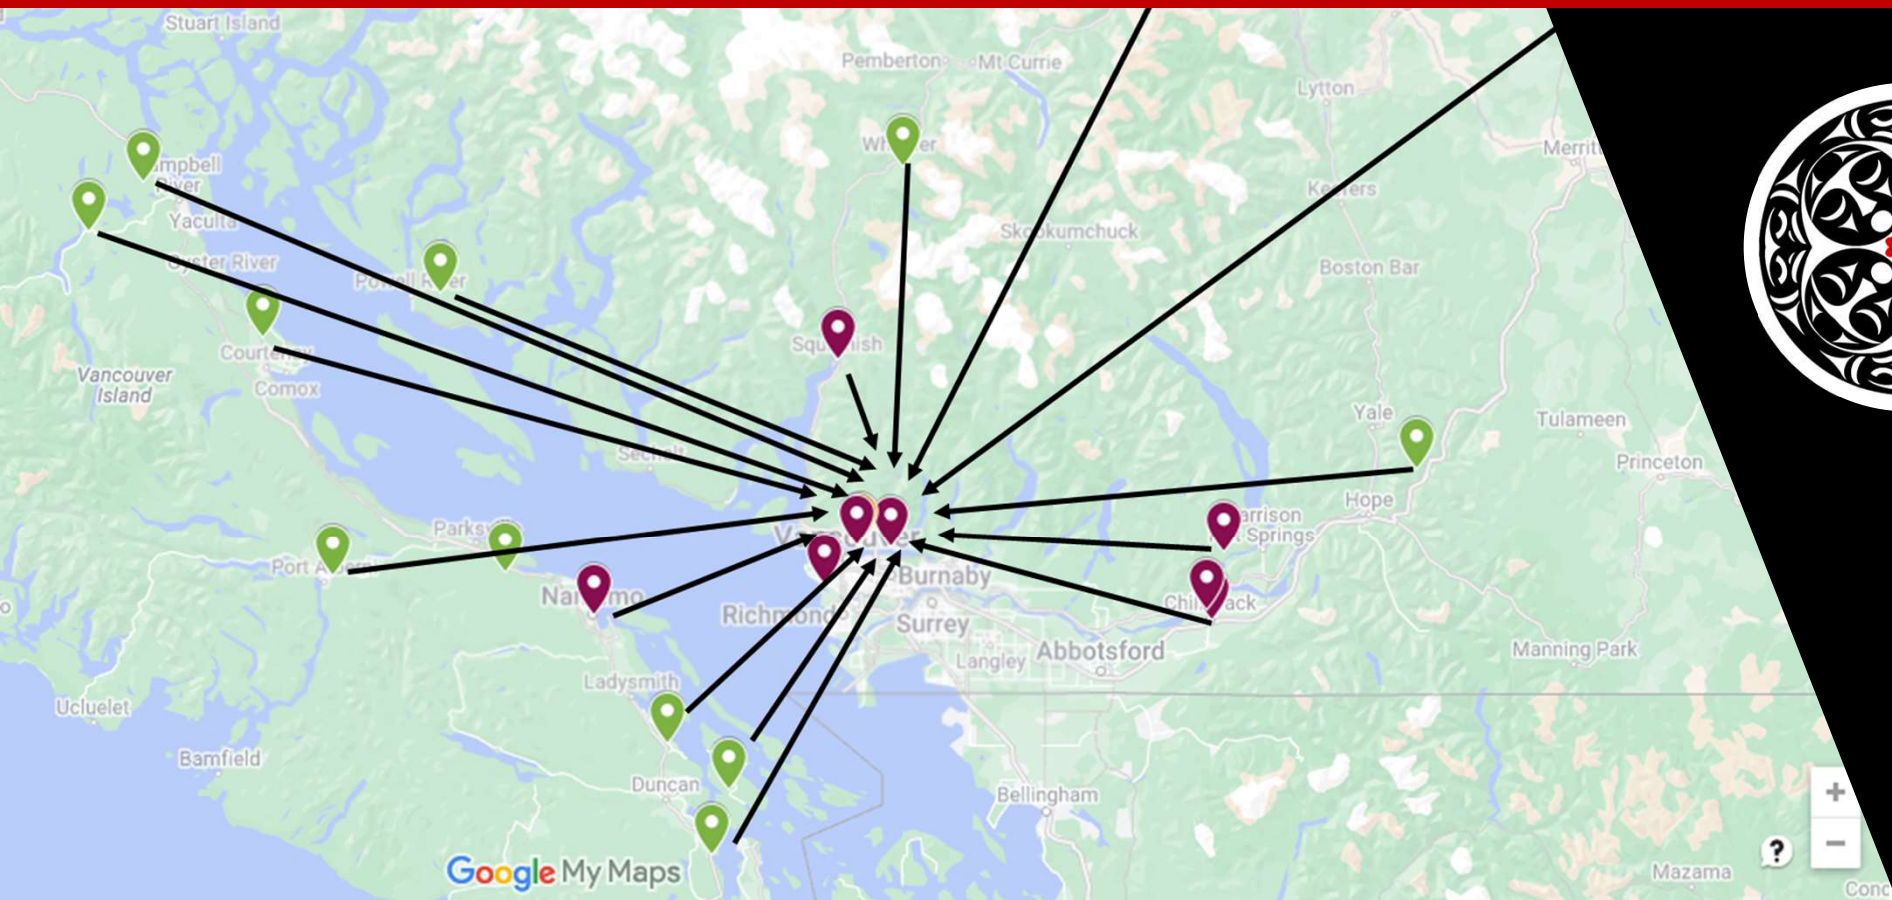

Public Information

Communities may be unaware of the schools and hospitals their community members attended. Public data is only a partial view into the history.

Protected Information

Public Records for Squamish Students

Every community will have their own map, which shows the distance facilities children went to school. Example: Squamish children went to 8 other schools other than St. Paul's in the public records.

Solution

MOUs and data sharing agreements across communities.

Seamless access to the most up to date information via a shared Indigenous platform.

MOU

Lead communities

- Have access to public and restricted data and archives for specific facilities
- Have rights to make decisions on how to research on behalf of all students who are associated with facility

Neighbouring communities

- Have rights to community specific data and archives
- Have data and archives that are critical to the student experience

MOU

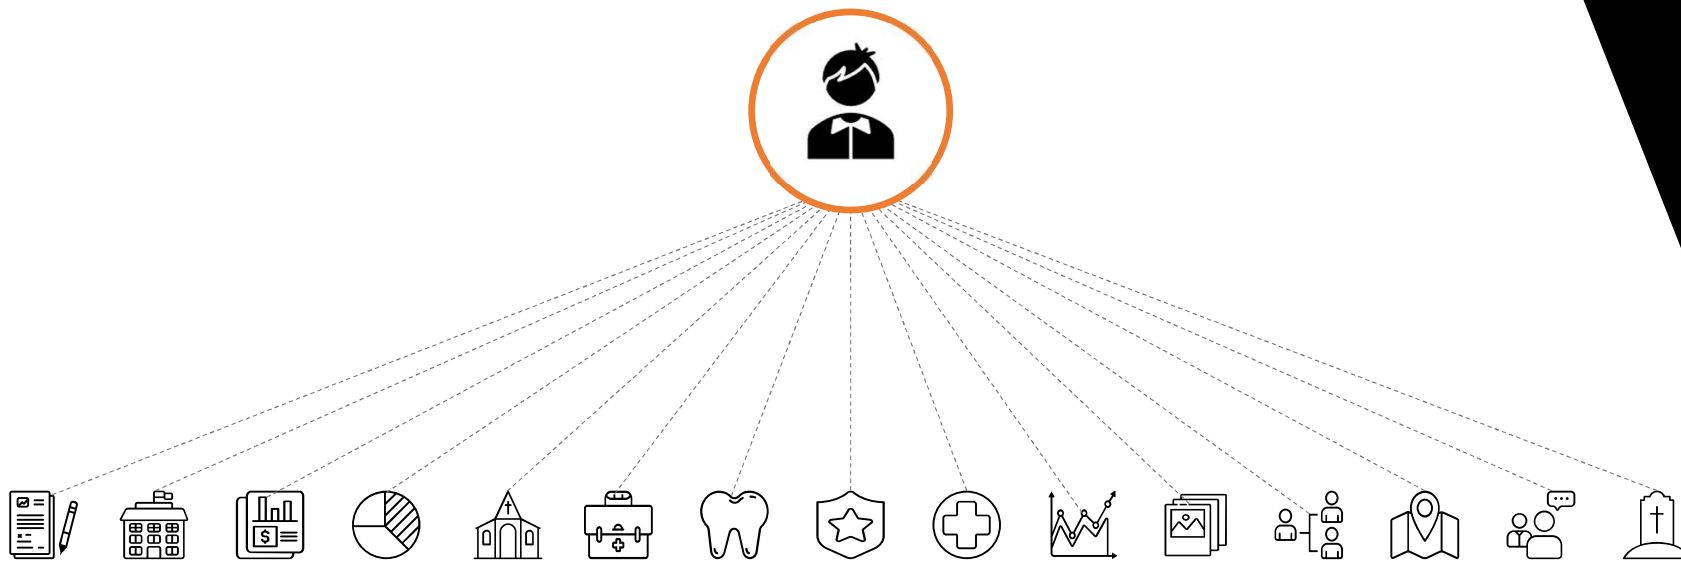

Confidentiality and Privacy

- Data cannot be used for any purpose other than project and community research
- Protected data is not for any public release or public reporting such as a story or book
- Agreement that release of information could harm survivors and families, and is not something that can be repaired legally
